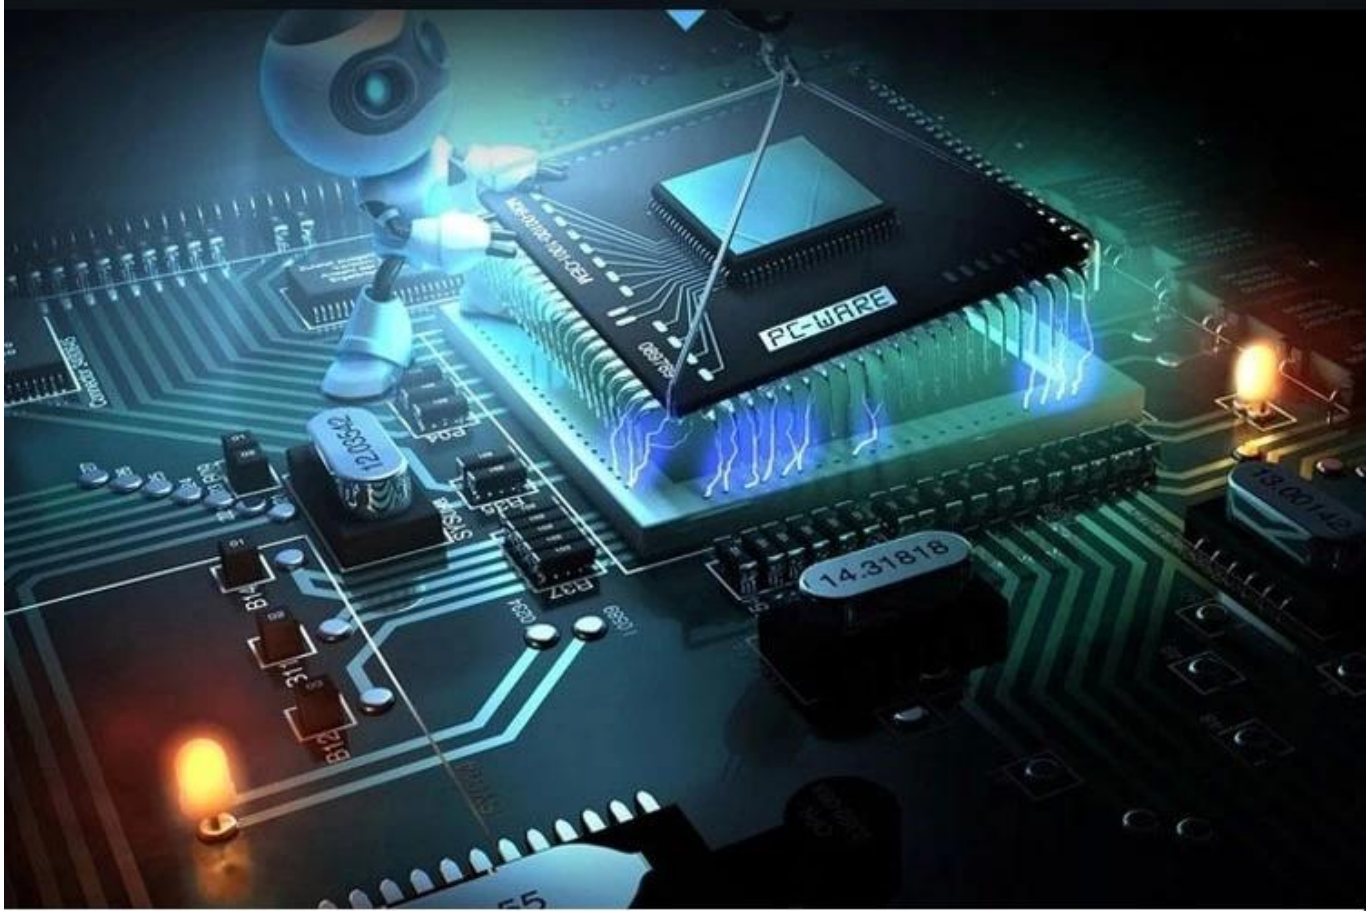
6,5-дюймовый двухъядерный процессор с двумя гироскопами, новый дизайн, балансировочный самокат

It uses space attitude control algorithm,fuzzy algorithm,the gyroscope system and the inverted pendulum system,achieve forward,acceleration,deceleration,brake and vehicle operation,about the direction of the balance depends on the body twist.



The battery directly affects the performance of the car,the balance of the balance of the car into original micro Samsung and 4.4AH lithium battery,super storage capacity,stable life 15-20km,safe and reliable performance.

The new motor,strong power,high temperature resistant,not afraid to fall,stable internal structure,energy saving and high efficiency,let you can freely control the balance of the car is, smooth ride performance of rapid implementation of action in your mind.
