

Mining Machine GPU Mining System P106

Motherboard Layout Illustration

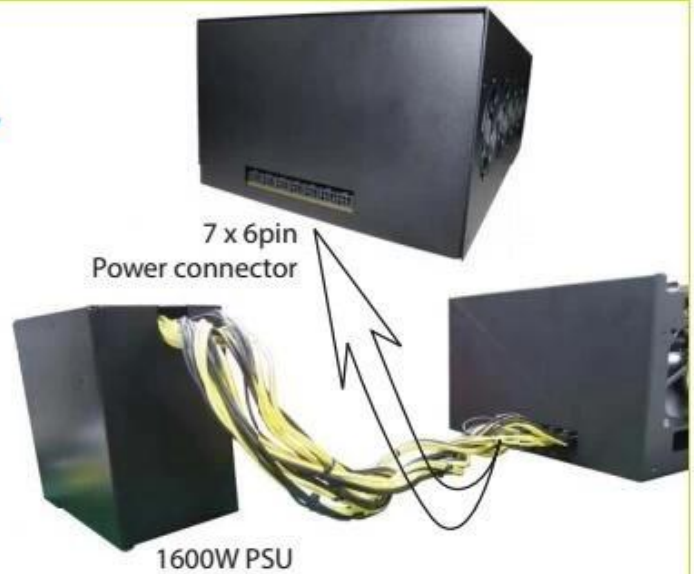

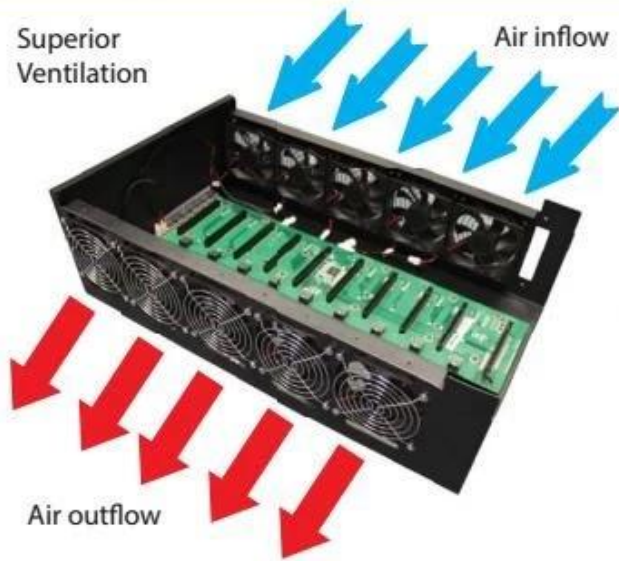

GPU Mining Card P106-100

- Special designed GPU and circuit board for mining purpose
- Maximized GPU and memory clocks setting
- Distinctive mining performance on ZEC (~2500Sol/s) and XMR (~4400H/s)
- Large heatsink for heat dissipation
- Low power consumption compared with other market solutions
- Balanced performance and power to maximize mining return

Comparison with DIY machine

<i>Feature</i>	<i>NewMagic Mining System P106</i>	<i>DIY Machine</i>
Hash Rate	High computing power, 8 x P106-100	Low computing power, 6 x RX470
Power Consumption	Energy saving. Adopt low power mobile CPU and low power design GPU with low TDP	Energy wasted. Regular desktop CPU and regular design GPU with high TDP
Cooling System	5*inflow + 5*outflow high power system fans with excellent air ventilation design. Easy for maintenese	Individual GPU cooler, higher power requirement, trouble handling for cooler failure and lose computing power
Management	With sturdy enclosure, dust control and air ventilation maximized	Open system, dusty and trouble to clean, dispersed ventilation
